

High Streamflow Advisory

Issued at: 11:55 AM, June 22, 2003

Issued by: River Forecast Centre, Flow Forecasting Unit

High Streamflow Advisory for Northwestern Alberta

Alberta Environment has issued a High Streamflow Advisory for streams in northwestern Alberta, including the following streams and their tributaries:

In the Peace River Basin:

- **Simonette River**
- **Waskahigan River**
- **Deep Valley Creek**
- **Little Smoky River**

In the Athabasca Basin:

- **Sawridge Creek**
- **Swan River**
- **Berland River**

Since Thursday, a large weather system has produced rainfall accumulations of up to 100 millimetres over a very large area of northwestern Alberta. So far, the greatest accumulations have been southeast of Grande Prairie and in the Swan Hills, on the southern side of Lesser Slave Lake. Another 25 mm of precipitation is forecast for these regions over the next 24 hours.

Although precipitation accumulations have been significant, the intensities have been small, which reduces the rate of runoff. Also, streams in the region were at low levels before the event. Therefore, no flooding problems are currently anticipated.

Additional information is available from the Forecasters Comments on our website at:

<http://www3.gov.ab.ca/env/water/ws/ForecastersComments/index.html>.

This advisory will be updated if the situation changes.

A High Streamflow Advisory means that stream levels are rising or expected to rise rapidly and no major flooding is expected. Minor flooding in low-lying areas is possible. Anyone situated close to the streams affected (campers, fishermen, boaters and the general public) is advised to be cautious of the rising levels.

A Flood Watch means that stream levels are rising and will approach or may exceed bank full. Flooding of areas adjacent to these streams may occur. Anyone situated close to the streams is advised to take appropriate precautionary measures.

A Flood Warning means that rising river levels will result in flooding of areas adjacent to the streams affected. Anyone situated close to the river should take appropriate measures to avoid flood damage
